INFORMED CONSENT FOR CHIROPRACTIC CARE

By beginning chiropractic care at Compass Chiropractic LLC, I acknowledge that the objective of the chiropractor is to identify and correct vertebral subluxations through a chiropractic adjustment. This is a specific manual force applied to the spine by hand or instrument, in which a controlled thrust or impulse is delivered to the involved area. The doctor may need to touch sensitive areas of the body to properly deliver an adjustment or analyze my spine. I acknowledge that techniques may require the body to be placed into awkward positions to better receive treatment. I request and consent to receiving chiropractic care, diagnostic X-rays, and other related therapies, on myself (or on the patient for whom I am legally responsible) by any licensed doctor of chiropractic employed at Compass Chiropractic LLC.

Many patients report benefits while under chiropractic care including increased range of motion and pain relief. Although most people respond positively to care, no guarantees of cure have been implied or given. As with any health care procedure, there are some associated risks which your doctor is required to bring to your attention. Though uncommon, you should note the possibility of fracture, disc injury, muscle strain, ligament sprain, dislocation, and costovertebral separation. Strokes have been reported following chiropractic manipulation. The probability of this is exceedingly rare, estimated at one in two million and can be further reduced by screening procedures. Complications generally result from underlying other pre-existing conditions. I understand that a risk exists.

I am ultimately responsible for my health and therefore may seek care from other related health care fields. Common alternatives to chiropractic treatment consist of acupuncture, massage therapy, physical therapy, and orthopedic evaluation. Each of these have their own risks and benefits. I am free to discuss any questions or concerns with the doctor as the need arises, especially during my first visit. Based this information, I understand the nature of treatment, its risks/benefits, and that other alternatives exist for me to pursue.

I have read this document and give my consent to receive chiropractic treatment. I intend this document to cover the entire course of care, now and in the future, and agree to its provisions.

Compass Chiropractic LLC

Voluntary Advance Beneficiary Notice (ABN)

To Our Medicare Patients: This document contains important information about what services Medicare does and does not cover when visiting a chiropractic office.

The information in this box refers to chiropractic adjustments only.

Deductible

For 2024, Medicare requires that you pay an annual Part B deductible of \$240 before they will begin paying for covered services. The part B deductible is cumulative across all physician offices, not just chiropractors, but excludes hospitals (Part A) and pharmacy (Part D) costs.

Chiropractic Adjustments

After you have met your deductible, or if your Medicare supplement covers the deductible for you, then Medicare will reimburse 80% of the allowable treatment charges. The other 20%, called the coinsurance, is the patient responsibility, unless the Medicare supplement also covers this, as many do.

X-Rays:

Dr. McDade offers X-ray on-site and may determine X-rays are warranted to properly diagnose and treat your case. Medicare does **not** cover X-rays performed in a chiropractic office. Our charge is \$75 per set of X-rays. A 'set' typically includes 2 views (front and side).

Examinations

All chiropractors are required to perform an intake examination in order to diagnose and provide appropriate treatment. Smaller re-examinations are performed every 30 days during active care, and for returning patients who have been out of the office for over 90 days. Medicare requires, but does **not** cover, these examinations. The intake examination cost is typically \$65, and re-exams are \$40.

Therapies

This term refers to ancillary services performed in the office and including decompression, heat with electric stim, flexion distraction, and trigger point work. **No therapies are covered by Medicare**. Our charge is ranges from \$10-\$15 per therapy. Most Medicare patients only get 1 per therapy visit, if any.

Maintenance

Once symptoms are resolved, or are not expected to improve with more treatment, Medicare considers the visit to be "maintenance.". This means it is not 'medically necessary' in their eyes and won't be covered. Dr. McDade will alert you when your case approaches this status. To be fair, no insurance covers maintenance visits, the same way auto insurance never pays for routine oil changes.

I,	(Printed Name) have read the above notice and understand that I
may receive services that above notice, not that I ag	re not covered by Medicare. My signature indicates I have received the se it is fair.
